About This Dashboard

Purpose:

This dashboard analyzes procurement spending for the City of Austin, providing insights into vendors, commodities, contracts, purchase orders, and purchasing trends to support procurement monitoring and decision-making.

Data Source:

City of Austin Open Data — publicly available procurement and purchasing data.

Scope:

Procurement transactions, vendors, commodities, contracts, and purchase orders.

Analysis Focus:

Vendor spending, commodity spending, contract performance, purchase order activity, and procurement trends.

Key Features:

Interactive filtering by Vendor, Commodity, Contract Status, and Year, with dedicated procurement and contract analysis views and dynamic report tooltips.

Model:

Built using Power BI with a centralized procurement fact table and supporting date dimension. Additional dimensional modeling can be incorporated to support scalable multi-dimensional analysis.
